Technical information

This energy-saving technology, we have introduced in our traditional indoor and outdoor light chains. In addition to the proven versions with conventional light bulbs, these fairy lights are also available with replaceable LED lamps. These LEDs are available with E 10 and E14 thread, in the shape of top lamps and shaft lamps. The electronics of this LED we have developed so that a single voltage per LED of 8-34 volts can be controlled. This has the advantage that the LED can be used universally in fairy lights from 7 to 30 burners and does not have to be paid attention to different voltages due to the number of burners.

Take care when using of traditional light chains that are equipped with LED bulbs, that these LED bulbs are not used with normal bulbs in a fairy lights and that you only use replacement LED bulbs of the MK Illumination brand to ensure the guarantee and liability.
